Premier Capital is the Developmental Licensee for **McDonald's** in Estonia, Greece, Latvia, Lithuania, Malta and Romania. It generates over €300 million of revenue from sales in 166 restaurants, employs 9.000 people and serves 150 million customers per year.

With the current changes in *European Data Privacy and Data Protection laws*, **Premier Capital** required a new solution to store its files that would continue to allow very specific collaboration functionalities in the cloud with **McDonald's**.

“We required a solution that allowed us to connect seamlessly to the McDonald's productivity platform for authentication purposes, where users could have a high degree of compatibility to millions of files created using Office and with low impact to our employees' daily routine” said Andrew Farrugia, Director of IT at Premier Capital PLC.

Keeping access to all applications to manage daily operational activities in 166 restaurants in 6 countries was key. The solution also had to be cost-effective to keep **Premier's Capital TCO** low.

Premier Capital tested the files compatibility between **Google Workspace** and *Office*, as well as the integration with **McDonald's SSO (Single Sign ON)** servers. ***“We asked eSource Capital to help us with a Proof of Concept (PoC). We needed to ensure that the authentication process***

was performed by McDonald's identity platform in order to guarantee that our employees accessed all our current applications as usual. In addition, we made sure to test the compatibility and ease of use of Google Workspace. eSource Capital, working directly with McDonald's, helped us with our testing by creating a PoC and migrating some of our native Office files in less than 24 hours. All authentication tests ran as expected and compatibility results were great." indicated Farrugia.

"A fast migration process was also required. We had several TBs of data and millions of files to migrate in a short period of time. eSource Capital helped each of our IT managers from our 6 markets to migrate their data in less than 8 weeks as needed. They provided us with a lot of flexibility and respected our operational priorities. They also trained our people to make the transition even easier than anticipated."

Premier Capital has now fully adopted **Google Workspace**, collaborates in real-time through *Google Drive*, and uses *Google Meet* for training. The group is also working with **eSource Capital** to evaluate the use of *Sites* and *Shared Drives* to create collaborative environments for the whole organization.
